

Representative Example (Sample 75): Better Persistence Agreement at Similar Fidelity

Ablation and Topology-inspired remain visually similar in field space despite much better PD agreement.

Persistence improvement vs Ablation
 d_B : 3.583 $\rightarrow$ 1.786 (50.2% lower)
 W_2 : 22.886 $\rightarrow$ 15.521 (32.2% lower)

Fidelity remains similar
 PSNR_{uv}: 31.324 $\rightarrow$ 31.043 (-0.281 dB)
 SSIM_{speed}: 0.790 $\rightarrow$ 0.791 (+0.001)

Takeaway
 Topology-inspired fine-tuning better matches persistent structure while staying close to reconstruction-only fine-tuning.
