

Sample 78: Topological Improvement Within a Conventionally Close Case

Candidate F is lower under d_B , $W_{2,\infty}$, and $W_{2,2}$; conventional closeness rank = 13/168.

Topological Improvement — CNN

- d_B gain: 37.68%
- $W_{2,\infty}$ gain: 32.07%
- $W_{2,2}$ gain: 34.10%
- minimum PD gain: 32.07%

Conventional closeness

- conventional rank: 13 / 168
- $|\Delta PSNR_{uv}|$: 0.5595 dB
- relative speed MAE gap: 9.47%
- relative speed RMSE gap: 3.55%

Interpretation

Candidate F is conventionally close to CNN, while all three validated PD metrics favor Candidate F relative to ground truth.
