

Sample 78: Largest Contributions to the Actual $W_{2,2}$ Assignment

Solid segments are real-to-real assignments; dashed segments terminate on the diagonal. Line weight uses one shared cost scale across all panels.

○ GT point × CNN point × Candidate F point — real-to-real assignment —◆— assignment to diagonal

Aggregate actual $W_{2,2}$: CNN=30.5681, Candidate F=20.1448; relative improvement=34.10%. At most the 30 largest nonzero assignment costs per panel are drawn; numeric distances use every positive-persistence finite pair.
